

## Printing from Power Point (Multiple slides per Page)

Go to File > Print or press Ctrl+P (simultaneously)

Select layout of your print Job:

**Slides** = This option prints one slide per page.

**Handouts** = This option will print multiple slides per page. If you select 3 slides per page, it will give you room to write notes next to each slide.

**Notes page** = This will print any additional notes that the PowerPoint creator has supplied, or it will simply leave room for you to write notes for each slide.

**Outline view** = This prints all slides in small images in order.

After selecting what you want printed click OK.
